CREATE REACT APP

```
# npx create-react-app new-app
```

```
# cd new-app
```

```
# npm start
```

<https://github.com/facebook/create-react-app>

WHAT THE HECK IS JSX?

JS + XML

(syntax extension to JavaScript)

WHAT THE HECK IS JSX?

```
function formatName(user) {  
  return user.firstName + ' ' + user.lastName;  
}
```

```
const user = {  
  firstName: 'Harper',  
  lastName: 'Perez'  
};
```

```
const element = (  
  <h1>  
    Hello, {formatName(user)}!  
  </h1>  
);
```

```
ReactDOM.render(  
  element,  
  document.getElementById('root')  
);
```

WHAT THE HECK IS JSX?

Babel compiles JSX to React.createElement()

```
const element = (  
  <h1 className="greeting">  
    Hello, world!  
  </h1>  
);
```

```
const element = React.createElement(  
  'h1',  
  {className: 'greeting'},  
  'Hello, world!'  
);
```

Render from js variable

```
function App() {  
  const greeting = 'Hello, world!';  
  const greetingElement = (<div className="class-12">{greeting}</div>);  
  
  return (  
    <div className="App">  
      <header className="App-header">  
        <img src={logo} className="App-logo" alt="logo" />  
        { greetingElement }  
      </header>  
    </div>  
  )  
}
```

Render list (array of data) using .map

```
function renderPeopleList() {  
  return people.map(person => {  
    const { firstName, lastName, avatar } = person;  
  
    return (  
      <li className="list-item">  
        <div>{firstName}</div>  
        <div>{lastName}</div>  
        <img src={avatar} className="avatar" alt={`avatar for ${firstName} ${lastName}`} />  
      </li>  
    );  
  });  
}
```

Render using function

```
function App() {  
  return (  
    <div className="App">  
      <ul className="list">{renderPeopleList()}</ul>  
    </div>  
  );  
}
```

Render list of elements

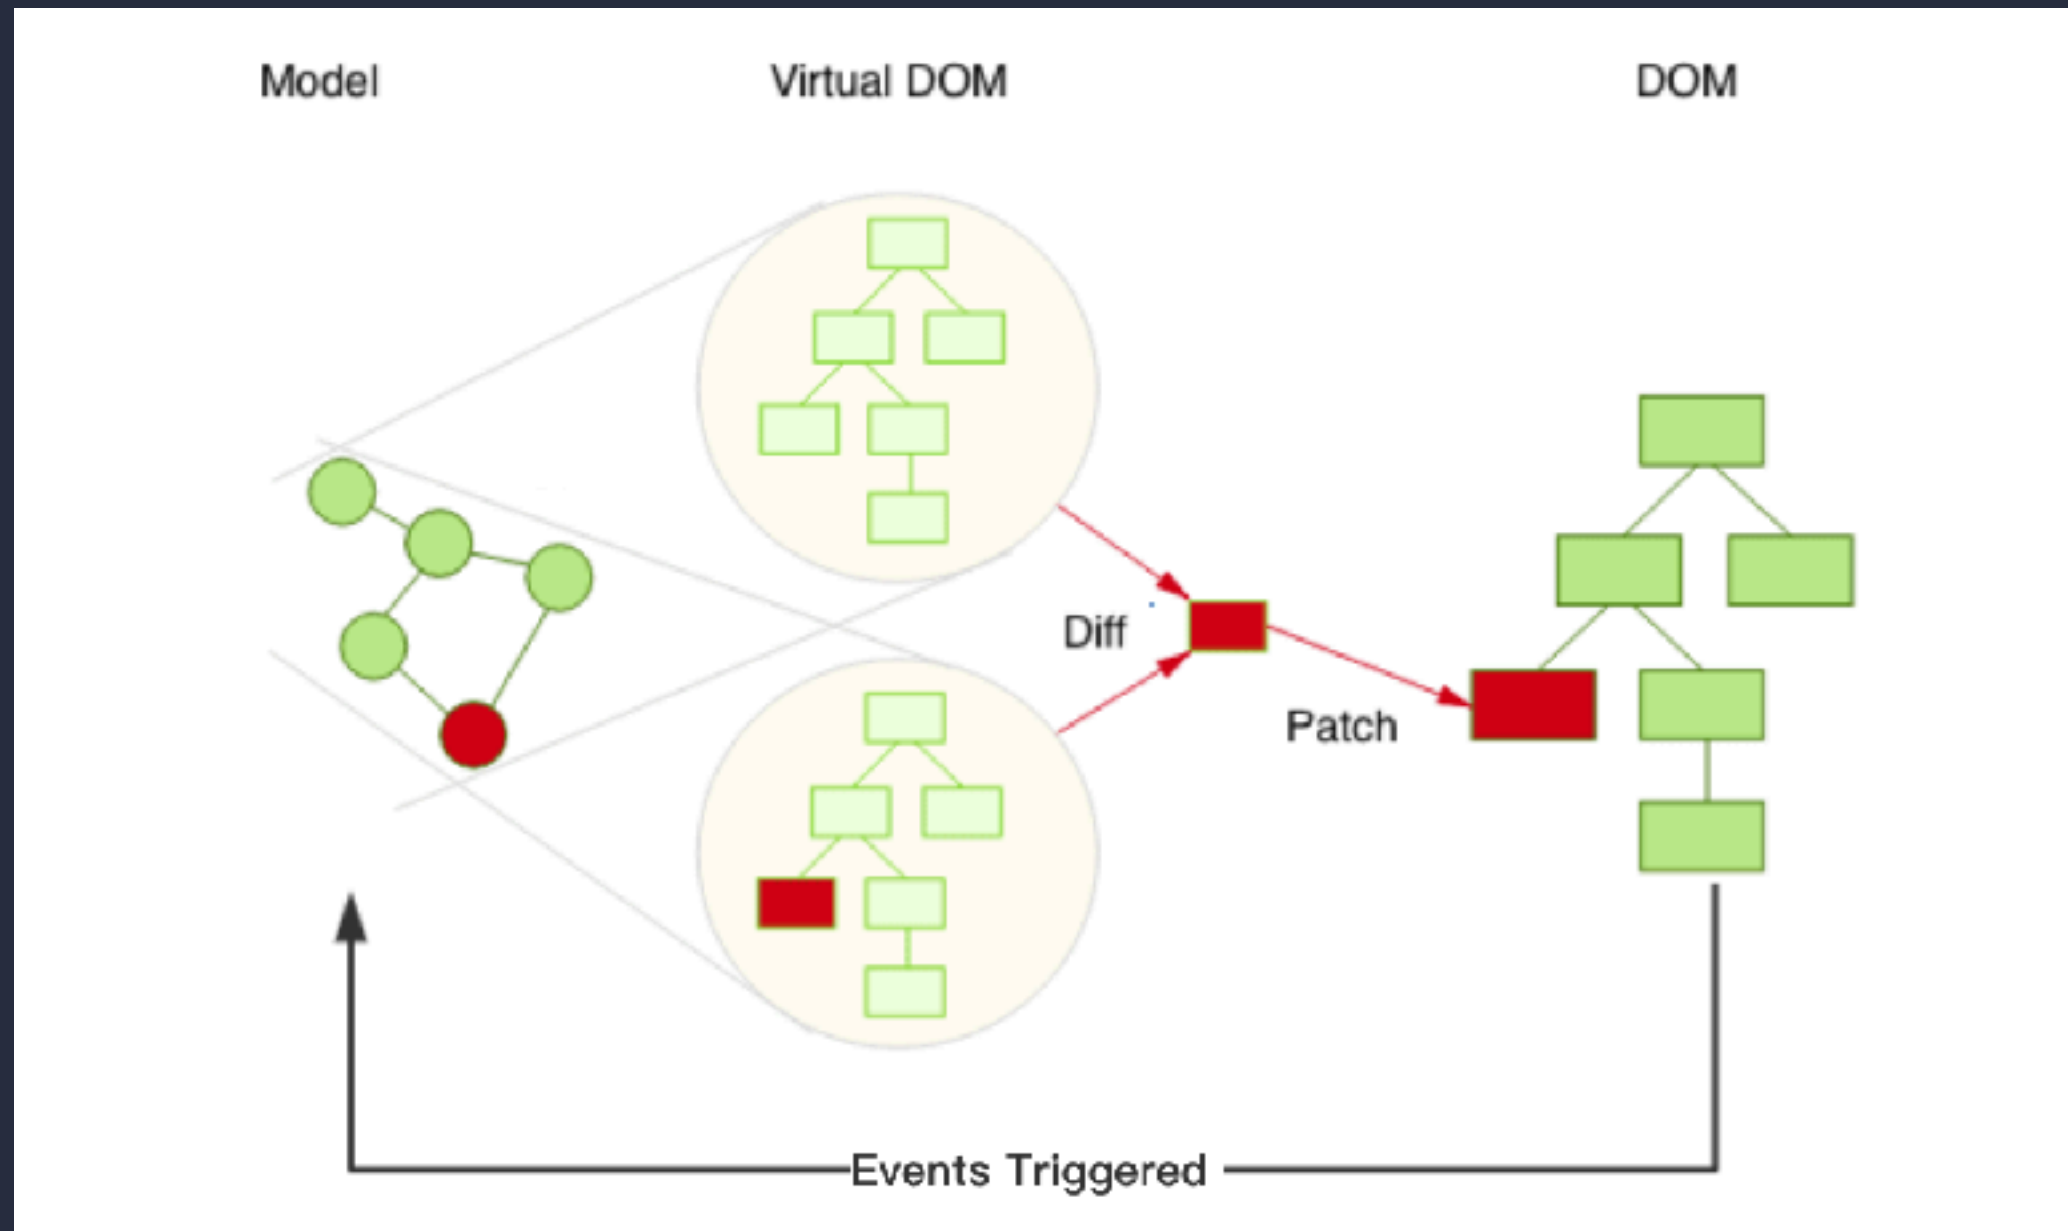

```
const renderMultipleElements = () => {  
  return ([  
    <div key="btn-element-1" className="btn-element">Btn 1</div>,  
    <span key="btn-element-2" className="btn-element">Btn 2</span>,  
    <a key="btn-element-3" className="btn-element" href="#">Btn 3</a>  
  ]);  
};
```

WHAT THE HECK IS JSX?

THE ***REACT-DOM*** PACKAGE
PROVIDES DOM-SPECIFIC
METHODS THAT CAN BE
USED AT THE TOP LEVEL OF
YOUR APP

VIRTUAL DOM
